

A Safe Vote for Every American

Verified, trustworthy elections — for the people and the officials who serve them.

One citizen. One verified vote. A result the whole nation can trust — and not one eligible American left behind.

An election can now be not just fair, but provably fair — a result every citizen can check, and a ballot no one can steal, forge, or cast twice. Here is how.

YOUR VOTE, PROTECTED

Yours alone

You hold one token — your verified key to vote. Once it's used, no one can ever vote in your name.

Private forever

No one — not an official, not the government — can trace how you voted.

Counted, and provable

A receipt lets you confirm your ballot is in the final count.

Checkable by anyone

Voters, candidates, and press can all confirm the total is right — no trust required.

PROVING WHO YOU ARE — MADE EASY

If the rolls already know you, your token comes automatically — no action, no trip.

If there's any question, clear it in about two minutes — in person or by video from home. A flag is a to-do, never a verdict.

NO ELIGIBLE VOTER LEFT BEHIND

Every path — video, in-person, assisted — is built so every eligible American can complete it.

Real eligibility questions are settled person-to-person, with a chance to answer — never by a faulty list deleting a name.

WHAT IT WILL NEVER DO Track how you voted · keep a secret file of your ballot · purge voters by faulty lists · leave anyone out for lacking a computer.

We don't make the electorate smaller. We make it certain — every eligible voice, verified and heard.

Scope note. A strategy overview for the public and for government — not legal or security advice or a statement of federal policy. Adoption is voluntary and adopter-controlled: elections in the United States are administered by states and local jurisdictions. This plan is designed so that every eligible voter can verify — not so that any eligible voter is excluded.
